To Whom It May Concern:

Re: IPEX venting for use with Rheem family of Tankless Condensing Water Heaters

Rheem's family of Tankless Condensing water heaters are certified by CSA (Canadian Standards Association) to the American National Standard/CSA Standard For Gas Water Heaters Volume III, Storage Water and With Inputs Ratings above 75,000 Btu per hour, Circulating and Instantaneous ANSI Z21.10.3 • CSA 4.3-2017.

These Tankless Condensing models have specific vent and combustion air-inlet system configurations and installation requirements that are detailed in the Use & Care Manual supplied with the water heater.

In addition to the schedule 40 PVC, IPEX 1738 PVC venting system can be used with these units when installed according to the Use and Care Manual supplied with the water heater.

IMPORTANT: No other terminations except those detailed in the water heater's Use and Care Manual are approved for use.

Feel free to contact Rheem National Service Department at 1-800-432-8373 if you have any questions.

Sincerely,
