Re: UL 1738 Certified PVC Vent Pipe

To Whom It May Concern:

Recent changes to the National Fuel Gas Code have resulted in new requirements for use of UL-1738 certified plastic vent materials with Category IV gas appliances.

Since IPEX System 1738 certified PVC pipe has identical dimensional properties as compared to standard PVC, these vent materials are approved for use with all Navien gas appliances.

Please follow all venting guidelines provided in the Navien Installation Manual and vent manufacturer.

Regards,

Robert Choi
